Incident response: top 5 metrics to watch

These are the five to watch first, chosen because together they catch both unfair routing and real harm to customers.

#	Metric and trigger	Severity	Owner (accountable)	Respond within	Immediate actions	Escalate to	Close when
1	**Four-fifths ratio** (tier's Fast-Track rate ÷ the best tier's) below 0.80	High	Compliance lead	5 business days	Confirm the data is complete. Re-run the ratio adjusted for claim amount and car age. Open an incident record. Notify the head of claims and the model owner.	Fairness committee. Senior leadership if it fails 2 months in a row.	The ratio is 0.80 or higher for 3 months in a row and the cause is written up.
2	**Over-routing** (actual Queue B rate ÷ expected) above 1.25	High	Model owner (data science)	5 business days	Find which routing rules or model inputs send the tier to Queue B, and check for location-linked inputs. Test the model without them. Report the impact on fraud catch rate.	Fairness committee and Compliance	The ratio is 1.10 or lower for 2 months and the fix is approved.
3	**False investigations** per 100 claims, 5 or more above the best tier	High	SIU manager	5 business days	Sample 25 to 50 investigated claims from the tier that were paid in full and record why each was flagged. Start a second review before flagged-tier claims enter Queue B.	Head of claims, Compliance, and Customer experience (for outreach to affected customers)	The gap is 3 or less for 2 months.
4	**Fraud confirmed per 100 investigations**, a tier 35% or more below the best tier	Medium	SIU manager	10 business days	Compare confirmed-fraud rates by tier. If high tiers are investigated more but caught less, the extra scrutiny isn't justified, so lower the routing weight for that tier.	Model owner and fairness committee	The tier's rate is within 20% of the best tier's.
5	**Repeated breach**: the same tier drifts from its baseline (≥3 pts, $p < 0.05$) two months running, or fails the four-fifths test in 3 of the last 6 months	**Critical**	Fairness committee chair (senior sponsor)	2 business days	Freeze routing-rule changes and run a full review of the routing model. Agree a fix plan with deadlines. Ask legal whether regulators must be told.	Executive leadership and Legal	The fix is in place, the monitor stays clean for 3 months, and the review is signed off.

In every incident, the person who spots the alert logs it within 1 business day. Each incident has one named owner, even when several teams help. Closing it requires a short write-up of the cause, the fix, and how to prevent a repeat.
