Claim routing fairness: incident response plan

Covers the ZIP-tier routing monitor (synthetic claims, January–June 2026). Queue A = Fast-Track, Queue B = Special Investigation. Live dashboard: https://claude.ai/artifact/Tb995318rSCxCwaScEweRG

Triggers, owners and actions

#	Metric and trigger	Severity	Owner (accountable)	Respond within	Immediate actions	Escalate to	Close when
1	**Four-fifths ratio** (tier's Fast-Track rate ÷ best tier's) below 0.80	High	Compliance lead	5 working days	Confirm the data is complete. Re-run the ratio adjusted for claim amount and car age. Open an incident record. Notify the head of claims and the model owner.	Fairness committee. Senior leadership if it fails 2 months in a row.	Ratio is 0.80 or higher for 3 months in a row and the cause is written up.
2	**Over-routing** (actual Queue B rate ÷ expected) above 1.25	High	Model owner (data science)	5 working days	Find which routing rules or model inputs send the tier to Queue B; check for location-linked inputs. Test the model without them. Report the impact on fraud catch rate.	Fairness committee and Compliance	Ratio is 1.10 or lower for 2 months and the fix is approved.
3	**False investigations** per 100 claims, 5 or more above the best tier	High	SIU manager	5 working days	Sample 25 to 50 investigated claims from the tier that were paid in full and record why each was flagged. Start a second review before flagged-tier claims enter Queue B.	Head of claims, Compliance, and Customer experience (outreach to affected customers)	Gap is 3 per 100 or less for 2 months.
4	**Fraud confirmed** per 100 investigations, a tier 35% or more below the best tier	Medium	SIU manager	10 working days	Compare confirmed-fraud rates by tier. If a tier is investigated more but caught less, the extra scrutiny isn't justified: lower the routing weight for that tier.	Model owner and fairness committee	Tier's rate is within 20% of the best tier's.
5	**Repeated breach**: the same tier drifts from its baseline (3+ pts, $p < 0.05$) two months running, or fails the four-fifths test in 3 of the last 6 months	**Critical**	Fairness committee chair (senior sponsor)	2 working days	Freeze routing-rule changes. Run a full review of the routing model. Agree a fix plan with deadlines. Ask Legal whether regulators must be told.	Executive leadership and Legal	Fix is in place, the monitor stays clean for 3 months, and the review is signed off.

In every incident: whoever spots the alert logs it within 1 working day; each incident has one named owner, even when several teams help; closing it needs a short write-up of the cause, the fix, and how to prevent a repeat.

Where we stand today: 4 of 5 triggers open

#	Trigger	Current value	Status
1	Four-fifths ratio	Tier 5 at 0.70 (Tier 4 at 0.81, just passing)	**Open**
2	Over-routing	Tier 5 at 2.1×, Tier 4 at 1.7× expected	**Open**
3	False investigations	Tier 5 +16 per 100, Tier 4 +10 per 100, vs Tier 2	**Open**
4	Fraud confirmed	No confirmed-fraud field in the data	**Can't check yet**
5	Repeated breach	Tier 5 below 0.80 in all 6 months	**Open, Critical (most urgent)**

Thresholds are suggested starting points; Compliance and Legal set the final numbers. The four-fifths rule is a screening heuristic, not a legal finding. Per-100 gaps are measured against Tier 2 (9.9 per 100).
